Summary

First-year B.Tech Computer Science student at Poornima University with hands-on experience building a camera-based attendance system, a two-player game and a Flutter mobile app. Seeking a software, game or app development internship to learn from real projects and contribute to a team.

Education

B.Tech, Computer Science and Engineering — Poornima University, Jaipur (2026 – 2030)

Class XII (Informatics Practices), Kendriya Vidyalaya No. 4, Jaipur — 86%

Class X, Kendriya Vidyalaya No. 4, Jaipur — 83.4%

Skills

- **Programming:** Python, Java, C, JavaScript, Dart
- **Web:** HTML, CSS
- **Mobile:** Flutter
- **Database:** MySQL
- **Interests:** Game development, app development

Projects

SpotThatCar (Flutter, Dart) — in progress

- Mobile app where a user uploads a photo of a car and gets its specifications; the car is added to the user's virtual garage.
- Rarer cars earn more points, with a leaderboard to compare players.
- Includes a car news tab and a tool to compare two cars (under development).

Face-Recognition Attendance System (Class XII Informatics Practices project, built with CMake)

- Opens the camera when the program runs and recognises students whose photos are stored in the database.
- Saves each student's attendance with the exact date and time.
- Automatically generates a weekly PDF report and saves it to a folder.

Two-Player Tank Game (Class XI Informatics Practices project)

- Single-device multiplayer game: one player controls a tank with the WASD keys, the other with the arrow keys.

Achievements

- Selected for the next round of the AI Vidya Setu hackathon, organised by IIT Delhi in collaboration with Kendriya Vidyalaya Sangathan (KVS), during Class XII; received a certificate and a medal.
